

**INDICATIONS FOR USE – EpiCare™ models LP and LPX**

The Light Age, Inc. EpiCare™ LP and LPX alexandrite laser systems are intended for use in general and plastic surgery and dermatology.

**Intended Use:**

The EpiCare™ Alexandrite Laser System models LP and LPX is intended for:

- Hair removal, and stable long-term or permanent hair reduction through selective targeting of melanin in hair follicles on all skin types (Fitzpatrick I-VI) including tanned skin. Permanent hair reduction is defined as long-term stable reduction in the number of hair regrowth after a treatment regime. The number of hairs re-growing must be stable over a time greater than the duration of the complete growth cycle of hair follicles, which varies from 4-12 months according to body location. Permanent hair reduction does not necessarily imply the elimination of all hairs in the treated area.
- Treatment of vascular lesions
- Treatment of benign pigmented lesions.
- Treatment of wrinkles.

**Safety and Efficacy**

The Light Age EpiCare™ Alexandrite Laser does not raise new questions of safety or efficacy.
